SECTION 4: PYTHON COMPARISON OPERATORS, 9 mins, 3 Parts

- 1/3 Comparison Operators in Python
 - -> in the .ipynb file
 - -> 2==2 <- are they the same (not variable assignment)
 - -> 'Bye' == 'bye' <- this is false</pre>
 - -> '2'==2 <- false because it is sensitive to types</p>
 - -> 2.0 == 0 <- True (it doesn't care about decimal points)</p>
 - -> 3!= 3 <- this is false (three isn't not equal to 3, != is asking is it not equal)
 - \rightarrow -> 1 < 2 <- this is asking is 1 < 2
 - -> logical operators
